

Save Mother Earth

Our Earth is the most beautiful planet in our solar system. As far as we know, Earth is the only planet that has life. This means that there is no other option, no Plan B, nothing. If we continue to destroy Earth, there will soon be nowhere left to live.

Before machinery, cars, factories, technology, and electricity were created, mankind had a good relationship with Mother Earth. Unfortunately, since humans developed cities and industries, the once eco-friendly lifestyle has changed. Man has been abusing natural resources up to the limit. Now we are tearing up peaceful, remote regions of the planet looking for oil and coal, and disrupting everything that lives there. Because of mankind, entire forests and animals species are disappearing. Our environment is completely polluted: we drink polluted water, inhale air full of dust, and eat food with pesticides. Therefore we are suffering from diseases and illnesses. As a consequence of human actions, the ozone layer is being destroyed, sea levels are rising, and the ice caps of Antarctica and Greenland are melting. Today global warming is warning us that climate change is not a scam and will kill us all. Mother Earth is in danger. Earth is in danger. We are in danger. And we must do something about it.

The progression of people and animals was made possible by plants. Plants are very important and are the main source of energy for most life on Earth. Forests are developed communities of plants and animals, with homes and habitats for thousands of different, unique species. Forests give us many vital things such as oxygen, food, shelter, medicines, and even furniture. Forests shield us from the heat of the sun, and from wind, cold, and rain, from snow and ice. Forests preserve the balance of nature, the environment, the climate, the weather, and much more. Forests are our life. Regardless, we are destroying the forests, which shows that we

are okay with destroying our life and our future. All the problems we face today are made 100% worse by cutting down and ruining forests. We must save forests.

Earth doesn't belong solely to human beings; living things (animals, plants, etc.) were occupying it for billions of years, and then our kind showed up, little over 5 million years ago. Earth is supposed to belong to all living things. But we killed and hunted thousands of different species, to make our lives more comfortable, more pleasant. Thanks to our species thousands of species are extinct because their homes are gone. Meanwhile, these animals, birds, insects, and reptiles have actually built a better environment for us, and have contributed so many things to make our world a better place. We must save wildlife.

Through pollution, hunting, and deforestation, our environment is being destroyed. Global warming and climate change are threatening Earth and all human beings. Because of our needs for cars, and factories, and airplanes, cities are becoming "heat islands". Pollution is becoming stronger and has the ability to kill millions. Levels of air pollution, water pollution, and noise pollution are concerningly high. Human interference has brought nature close to destruction. We must save the environment.

All these environmental changes are warnings of true global destruction. We all must become aware of the consequences of our actions. Thankfully, there are still things people can do. For instance, you can use a bicycle as much as possible. Additionally, you shouldn't misuse precious water and electricity. Don't use plastics when you can avoid it. Plant more trees, and don't allow anyone to cut them. Save wild animals to the best of your ability, and speak out and write against polluting industries. Lastly make students and citizens aware of the importance of

saving the environment, and the many things that we can do to protect the environment, forests and wildlife.
