Technology changed the world in many ways. Throughout the years technology impacted the whole world. There can be pros and cons about how technology impacted our lives. For example, there is way more social media then there was 10 years ago. Young children and young adults stay up until four o'clock in the morning playing video games or scrolling on their phone. When it comes to education the young children and young adults don't want to do any of it. All the young children and young adults want to do is sit home and play video games. So many children and young adults are failing school especially now that the pandemic is around and some kids are still doing virtual school.

Technology has had a major impact on culture. There are pros about the way technology impacts our lives. Life was difficult before the invention of modern technology, and daily activities took up far too much of our time. Technologies, which play an important role in human life, offer opportunities. New technology has made it easier to access schooling, medicine, business, transportation, and other services. Our lives have changed as a result of the ease and productivity offered by technology. It used to be that completing a simple task like laundry would take the majority of the day.

Technology also has some downfalls. These days, technology is being used unwisely, negatively affecting society and complicating our lives. Excessive use of different technologies is causing chaos on relationships with family members and friends. Although technology is sometimes used by parents to communicate with their children and stay on top of their whereabouts, it is not always necessary. Technology has made communication easier,

but it is also causing people to not communicate face to face. The use of text language has a negative impact on students.

Modern technology does seem to have a negative impact on anyone's health. People nowadays are sleepy because keeping their eyes away from their phone or laptop screens has become nearly impossible. This may contribute to vision problems, cancer, obesity, as well as other concerns.

Forms of technology have impacted transportation nowadays. New forms of cars are being invented. For example, the new Tesla, more and more people are starting to purchase Teslas. The Teslas are electric so no need for gas, charging is required for Teslas. Another example is security. At an airport you have to get a lot of security done. The security at an airport upgraded tremendously. A popular security item is cameras for outside your house. Most people have a popular brand camera called "Ring." If people don't have a Ring, then they might have a camera that connects to your phone. As you can see, security has definitely upgraded since new technology has been introduced.

In conclusion, technology has impacted our lives. Social media, transportation, and security upgraded largely. There are also negative impacts on technology, people are starting to be harmed by staring at a screen or even playing video games till 4 am. We cannot immediately abandon technology at this moment, so perhaps we should ensure that it can not rule us.
